BUSINESS HIGHLIGHTS

by
*Neil J. Dikeman, Jr.**

An analysis of year end economic indicators reveals that business conditions in Oklahoma fared exceptionally well during 1981 despite some set-backs late in the year and the persistent lag in residential construction. Personal income was nearly 15 percent higher than in 1980 and, after adjustment for price changes, it registered a gain of 5 percent. This means that the average Oklahoman experienced a 5 percent increase in purchasing power.

Not only did the Oklahoma resident receive a higher income but he also spent more. This is attested to by the fact that retail sales during the year were 15 percent ahead of 1980 despite the less than seasonal rise in sales noted in December.

Most of the increase in retail activity was attributable to sharp gains in sales of durable goods—particularly furniture and home appliances and in such non-durable merchandise lines as food, variety stores and apparel. Even new car sales—which slumped nationally during the year—were significantly higher than in 1980. Contacts with automobile dealers in various parts of the state indicate that purchases of larger cars are now outrunning the demand for compacts and this change in preference has contributed much to the 1981 increase.

The job picture in Oklahoma remained bright throughout most of the year although some shut-downs in the fourth quarter tended to make the short term employment outlook somewhat less optimistic than was the case at mid year. For the year, employment averaged 1.3 million jobs per month which is 6.2 percent ahead of the 1980 average. All of this gain occurred in the non-agricultural sector with trades and services contributing most to the increase. The only decreases in employment noted during the year were the drop of 4,000 jobs in government agencies and the loss of 100 jobs in agriculture. This rise in employment was accompanied by a significant decline in the average monthly unemployment rate from 4.8 percent in 1980 to 3.7 percent in 1981. It is doubtful that the unemployment rate will continue at such low levels during the first half of 1982 in view of recent plant closing and reductions in the work forces of firms which are continuing operations.

Increases in employment and income represented only two of the brighter spots in Oklahoma's economy as crude oil production continued the upward trend begun in 1980. During 1981, a total of more than 154 million barrels of oil were produced in Oklahoma fields. This represents an increase of 4 million barrels over the 1980 level. Another encouraging indicator was the rise of 2.4 percent in industrial power sales which is a measure of industrial production. This, coupled with the average monthly increase of nearly 2 percent in manufacturing employment indicates that manufacturing activity remained high throughout most of the year.

The condition of Oklahoma banks continued to improve during the year as total deposits rose by an estimated 24 percent during the year due chiefly to a 36 percent jump in savings account balances while demand deposits rose by only 2 percent. Assets of savings and loan associations also fared better than in 1980 as this indicator rose 12.2 percent over the year despite a 23 percent drop in the volume of mortgage loans.

Great concern continues to be expressed about the construction industry which nationally has faltered badly. In Oklahoma, however, the total construction picture has not been all bad despite the continuing lag in residential building activity which registered a dollar volume loss of about 0.3 percent and one of 25 percent in terms of dwelling units authorized. This loss coupled with a decline of 23 percent in street and highway construction was offset by sharp increases of 89 percent in commercial building and 98 percent in industrial building so that the total dollar volume of construction activity in 1981 exceeded the 1980 level by nearly 24 percent.

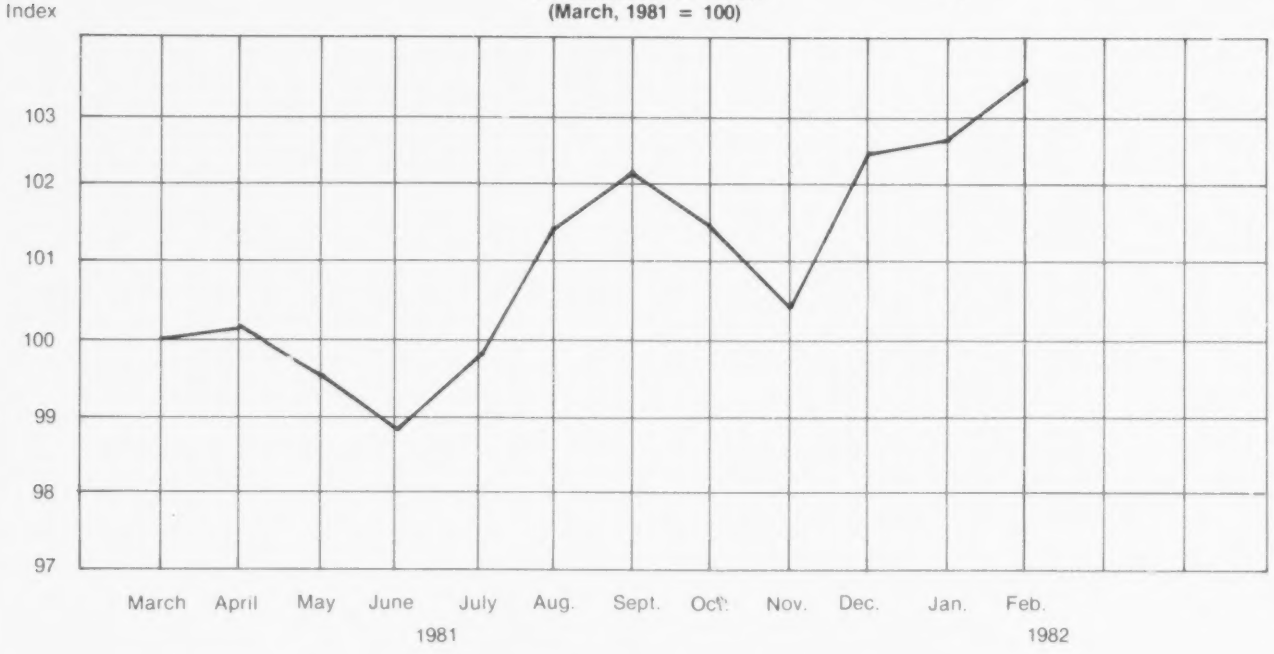
CONSUMER FOOD PRICE INDEX
OKLAHOMA CITY SMSA
(March, 1981 = 100)



FOOD PRICES CONTINUE UPWARD

Retail food prices in the Oklahoma City SMSA —as measured by the Consumer Food Price Index —rose for the third successive month during February. This latest increase boosted the index to 103.5 (March, 1981 = 100) which was the highest for the past year. It is significant that this current three month upturn matches the length of the previous longest seasonal rise experienced during the period from June 1981 through August, 1981.

The increase of 3.5 percent in this index since March, 1981 is slightly less than the 3.7 percent increase in the grocery component of the National Consumer Price Index for the same period. In addition, this increase compares most favorably with the 5 percent rise over the same period in the grocery component of the Consumer Price Index for the Dallas - Ft. Worth area.

This latest price rise was triggered by those food items requiring extensive processing such as bakery goods, canned and frozen foods and miscellaneous foods and beverages. In addition, a substantial gain in prices of home care products also contributed somewhat to the increase. These increases were accompanied by moderate decreases in the prices of fresh meats—down 2 percent; fresh fruits and vegetables—down 6.5 percent and dairy case items—down 2 percent. These decreases, however, were not sufficient to offset the gains in the other food and home care product lines.
